

Assignment11

Aravind A Anil

April 23, 2021

Problem Statement(Gate31):An experiment consists of two papers.paper1 and paper2.The probability of failing in paper 1 is .3 and that in paper 2 is .2.Given that a student has failed in paper 2,the probability of failing in paper 1 is .6.The probability of student failing in both is

A) .5 B) .18 C) .12 D) .06

	Description
0	failure
1	success
X	Paper 1
Y	Paper 2

Table 1: Description

Given,

$$Pr(X = 0) = .3, Pr(Y = 0) = .2$$

$$Pr(X = 0|Y = 0) = .6$$

Using bayes theorem we know that,

$$Pr(X = 0|Y = 0) = \frac{Pr(X = 0, Y = 0)}{Pr(Y = 0)}$$

$$\begin{aligned} Pr(X = 0, Y = 0) &= Pr(X = 0|Y = 0) \\ &\quad \times Pr(Y = 0) \\ &= .6 \times .2 \\ &= .12 \end{aligned}$$

Option C is correct answer
